

4.3.1 – The institution frequently updates its IT facilities including Wi-Fi

Our entire medical campus is powered by a robust Wi-Fi network infrastructure. This ensures seamless connectivity and access throughout the campus premises. Additionally, we provide exclusive Wi-Fi services designed to support up to 500 clients in our examination halls, guaranteeing a smooth examination experience.

Furthermore, we take pride in being certified by Microsoft as a smart campus, powered by the M365 Education Program. This certification acknowledges our commitment to utilizing advanced technology for educational purposes. As part of this initiative, we provide tablets to students to facilitate online examinations, enabling them to take assessments digitally and conveniently.

We prioritize staying up to date with the latest Wi-Fi technologies. Our team consistently upgrades our network infrastructure from N to AC and AC-MU-MIMO bands. This ensures that our Wi-Fi services remain fast, reliable, and capable of handling the increasing demands of our campus community.

To support our academic ecosystem, we have implemented a robust Learning Management System (LMS) powered by Moodle. It provides a comprehensive software solution that assists students in accessing their attendance records, exam schedules, timetables, and assessment details conveniently and efficiently.
