

NARAYANA MEDICAL COLLEGE

Chinthareddy Palem, SPSR Nellore Dt. Nellore-524003

Ophthalmology screening is essential for women, as they are more susceptible to various eye conditions due to hormonal changes, longer life expectancy, and increased risk of systemic diseases like diabetes and hypertension. Conditions such as glaucoma, cataracts, diabetic retinopathy, and age-related macular degeneration are more prevalent among women, often without noticeable symptoms in the early stages. Regular eye exams can detect these conditions early, allowing for timely intervention and prevention of vision loss. However, women often face barriers to accessing eye care, including financial constraints, caregiving responsibilities, and cultural norms, leading to delayed or missed screenings. Innovations like artificial intelligence and mobile teleophthalmology are enhancing early detection and accessibility, making it crucial for women to prioritize regular eye screenings as part of their overall health care routine.

To address these issues, we at **NARAYANA MEDICAL COLLEGE, NELLORE** under **Swasth Nari, Sashakt Parivar Abhiyaan** conducted a screening for Eye related diseases with special focus on Diabetic retinopathy, cataract and macular degeneration on 24-09-2025. Nearly ----- members attended to this program. **Dr. Vijayalakshmi MS.,** Professor & HOD, Department of Ophthalmology organised the program with the help of PR & Marketing Team. **Dr.P. Sreenivasulu Reddy,** Dean Narayana Medical College and **Dr. Sathish Asst.MS** delivered the inaugural speech on this program.
